Overview of UP Board Class 10 Maths Syllabus

The UP Board Class 10 Maths syllabus

covers various chapters, each with different types of problems. The key chapters include: Real Numbers, Polynomials, Coordinate Geometry, Linear Equations in Two Variables, Triangles, Circles, Surface Areas and Volumes, Statistics, Probability. In this guide, we present detailed solutions for exercises from these chapters.

Chapter-wise Detailed Solutions

Real Numbers
Exercise: Euclid's Lemma and Fundamental Theorem of Arithmetic
Q: Prove that $\sqrt{2}$ is irrational.
Solution: Assume, for contradiction, that $\sqrt{2}$ is rational. Then, it can be expressed as a fraction in lowest terms: $\sqrt{2} = p/q$, where p and q are integers with no common factors. Squaring both sides gives: $2 = p^2/q^2$. Rearranged as: $p^2 = 2q^2$. This implies p^2 is even, so p must be even. Let $p = 2k$, where k is an integer. Substituting back: $(2k)^2 = 2q^2 \Rightarrow 4k^2 = 2q^2 \Rightarrow 2k^2 = q^2$. Therefore, q^2 is even, which means q must be even. But both p and q are even, contradicting the initial assumption that the fraction is in lowest terms.
Conclusion: $\sqrt{2}$ is irrational.

Polynomials
Exercise: Factorization of Polynomials
Q: Factorize the polynomial $x^3 + 3x^2 - 4x - 12$.
Solution: Apply Rational Root Theorem to find possible roots: $\pm 1, \pm 2, \pm 3, \pm 4, \pm 6, \pm 12$. Test $x = 1: 1 + 3 - 4 - 12 = -12 \neq 0$. Test $x = 2: 8 + 12 - 8 - 12 = 0 \Rightarrow$ root found at $x = 2$. Use synthetic division or polynomial division to factor out $(x - 2)$:
 Synthetic division: $\begin{array}{r|rrrr} 2 & 1 & 3 & -4 & -12 \\ & & 2 & 10 & 12 \\ \hline & 1 & 5 & 6 & 0 \end{array}$
 Resulting polynomial: $x^2 + 5x + 6$. Factor $x^2 + 5x + 6: (x + 2)(x + 3)$. Final factorization: $x^3 + 3x^2 - 4x - 12 = (x - 2)(x + 2)(x + 3)$.

Coordinate Geometry
Exercise: Distance Formula and Midpoint
Q: Find the distance between points $A(3, 4)$ and $B(7, 1)$. Also, find the midpoint of AB .
Solution: Distance: $d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} = \sqrt{(7 - 3)^2 + (1 - 4)^2} = \sqrt{4^2 + (-3)^2} = \sqrt{16 + 9} = \sqrt{25} = 5$
 Midpoint: $M = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right) = \left(\frac{3 + 7}{2}, \frac{4 + 1}{2} \right) = (5, 2.5)$

Linear Equations in Two Variables
Exercise: Graphical Solution
Q: Graph the equations: $2x + y = 6$ and $x - y = 1$. Find the point of intersection.
Solution: Equation 1: When $x = 0$, $y = 6$. When $y = 0$, $x = 3$. Equation 2: When $x = 0$, $y = -1$. When $y = 0$, $x = 1$. Plotting these points and drawing lines, the intersection point can be found algebraically:
 $2x + y = 6 \Rightarrow y = 6 - 2x$
 $x - y = 1 \Rightarrow y = x - 1$
 Set equal: $6 - 2x = x - 1 \Rightarrow 6 + 1 = 3x \Rightarrow 7 = 3x \Rightarrow x = \frac{7}{3}$
 $y = \frac{7}{3} - 1 = \frac{7}{3} - \frac{3}{3} = \frac{4}{3}$
 Point of intersection: $\left(\frac{7}{3}, \frac{4}{3} \right)$.

Triangles
Exercise: Pythagoras Theorem
Q: In triangle ABC , if $AB = 13$ cm, $AC = 5$ cm, and $BC = 12$ cm, verify whether triangle ABC is right-angled.
Solution: Check if Pythagoras theorem holds: $AB^2 = AC^2 + BC^2 \Rightarrow 13^2 = 5^2 + 12^2 \Rightarrow 169 = 25 + 144 = 169$. Since both sides are equal, triangle ABC is right-angled at C (opposite side BC).

Circles
Exercise: Equation of a Circle
Q: Write the equation of a circle with center at $(2, -3)$ and radius 5.
Solution: Standard form: $(x - h)^2 + (y - k)^2 = r^2$. Plugging in: $(x - 2)^2 + (y + 3)^2 = 25$. This is the required equation of the circle.

Surface Areas and Volumes
Exercise: Volume of a Cylinder
Q: Find the volume of a cylinder with radius 7 cm and height 10 cm.
Solution: $V = \pi r^2 h = \frac{22}{7} \times 7^2 \times 10 = 22 \times 7 \times 10 = 1540 \text{ cm}^3$

Statistics
Exercise: Mean Calculation
Q: Find the mean of the following data: 12, 15, 14, 10, 13.
Solution: $\text{Mean} = \frac{12 + 15 + 14 + 10 + 13}{5} = \frac{64}{5} = 12.8$

Probability
Exercise: Basic Probability
Q: A bag contains 4 red, 5 blue, and 6 green balls. What is the probability of drawing a green ball?
Solution: Total balls = $4 + 5 + 6 = 15$. Probability: $P(\text{green}) = \frac{6}{15} = \frac{2}{5}$

In this comprehensive guide, we will explore what a seaworthy word ladder entails, how to approach solving it, and the significance of page 43 in the context of a larger puzzle collection or book.

Whether you're a seasoned puzzle solver or a newcomer eager to sharpen your linguistic abilities, understanding the nuances of this specific word ladder can enhance your problem-solving toolkit and deepen your appreciation for word-based challenges.

Understanding Word Ladders: The Basics

What Is a Word Ladder?

A word ladder is a classic word puzzle that involves transforming one word into another by changing a single letter at a time. Each intermediate step must be a valid word, and the goal is to reach the final word in the fewest possible steps. The concept was popularized by Lewis Carroll, who devised the game as a way to challenge and entertain readers. For example, transforming the word "COLD" into "WARM" might look like this:

COLD → CORD → CWARD → WARME

Each step changes only one letter, and all intermediate words are real.

Common Variations and Challenges

Length of words: Typically, puzzles involve words of the same length—often four or five letters.

Theme-based ladders: Some puzzles focus on specific themes or categories, like nautical terms or adjectives.

Limited steps: The challenge can be to find the shortest possible ladder.

The Significance of 'Seaworthy' in Word Ladders

Defining 'Seaworthy'

The word "seaworthy" is an adjective used to describe a vessel that is fit or safe for sailing at sea. It embodies qualities like durability, safety, and readiness—attributes that metaphorically can be reflected in word puzzles that are "fit" or "prepared" for the challenge.

In the context of a word ladder, "seaworthy" might be part of a themed puzzle where all words relate to the sea, ships, or navigation. Alternatively, it could symbolize the level of difficulty or the quality of the puzzle—implying that the ladder is well-constructed and solvable.

Why 'Seaworthy' Matters in Puzzle Contexts

Thematic relevance: Puzzles themed around maritime vocabulary can use "seaworthy" as a pivotal or final word.

Difficulty indicator: The complexity involved in transforming basic words into "seaworthy" could signify an advanced puzzle.

Educational value: It introduces learners to maritime terminology and enhances vocabulary.
