The IEEE base paper serves as a cornerstone, often cited as a comprehensive resource that delineates the technical intricacies of phishing, its underlying psychology, and potential technical solutions.

Core Components of the IEEE Base Paper on Phishing

Definition and Classification of Phishing Attacks The paper begins by establishing a clear definition: > Phishing is a cyber attack technique where attackers impersonate trustworthy entities to deceive users into divulging confidential information. It then categorizes phishing attacks based on various parameters:

- Email Phishing:** The most common form involving deceptive emails.
- Spear Phishing:** Targeted attacks against specific individuals or organizations.
- Smishing and Vishing:** Phishing conducted via SMS and voice calls.
- Clone Phishing:** Replicating legitimate messages with malicious links.
- Angler Phishing:** Using social media platforms to lure victims.

Understanding these classifications helps tailor detection and prevention strategies accordingly.

Attack Vectors and Techniques The paper delves into the technical methodologies employed by attackers:

- Spoofed Websites:** Creating replicas of legitimate sites.
- Malicious Links and Attachments:** Embedding

malware or directing to phishing pages. Social Engineering: Exploiting human psychology to foster trust. Use of Obfuscation Techniques: Such as URL shortening, homograph attacks, and code injection. Detection Methodologies The IEEE paper emphasizes a multi-layered detection approach. Technical Detection Techniques: Heuristic Analysis: Identifying suspicious patterns.
